Scenario

You are a college student at the University of South Carolina.You don't particularly struggle with your schoolwork, but you sometimes can't find your assignments online, or you forget their due dates. You would like to have a way to manage all of your courses within one app.

Task 1: Figure out when your next math assignment is due, and where you need to turn it in

Task 2: You just enrolled in Intro to Film! Add it to your classes with the house icon!

Task 3: Find out your Marine Science professor's name and email!

Notes:

What changes you should make to your application:
- Add easier "back" and "home" functionality (users felt "stuck")
- Add "Cancel" features incase of a mistake
- Add more Icons for the classes (house for a "film" class?)

What should you keep about your application:
- Home screen chronological calendar
- Login with Google or Microsoft (hard to remember passwords)
- Sidebar of options (always available)
